

# PNG SIP TRUNKING

## SIP TRUNKING

Regardless of the size of your business, PowerNet Global can meet your needs with the newest in IP products. Our SIP Trunking service is ideal for businesses looking for an affordable voice/data solution that offers all the telecom advantages necessary for today's market with a lower price tag.

PNG's SIP Trunking service consists of as many SIP lines as you require for your business, offering Voice over IP (VoIP) and Internet Access through one connection to provide you with lower cost and more versatility.

The VoIP side of the service provides unlimited local and long distance calling with the option to have as few or as many voice lines as necessary. With the Dedicated Internet Access portion of the service, even more manageability is obtained with the ability to choose whether to use your own Internet Access connection or take advantage of cable Internet Access or a dedicated connection through PNG\*.

While PNG's SIP Trunking is very comparable to traditional Integrated Access, what makes this product different is its ability to provide you with the flexibility you require to best meet the needs of your business.
